

GENERAL INFORMATION:

The New Wireless Drive-Alert Vehicle Detection Systems detect vehicle movement in driveways, farm lanes, near workshops or equipment, and even at drive-up windows. Use it anywhere knowledge of vehicle movement is desired.

HOW EACH SYSTEM WORKS:

The Drive-Alert's sensor detects cars, trucks, motorcycles, bicycles, or any large moving metal object. When a vehicle is detected, the sensor transmits a signal to the control panel which sounds an electronic alert. All models can also turn on lights, open gates, turn on video equipment, or activate a number of other desired features.

An unlimited number of sensors can be used to protect multiple areas!

The sensors can also be placed in or next to stationary equipment such as tractors, mobile homes, campers, gas tanks, trailers, etc. The Drive-Alert will sound an alarm if this equipment is moved. Thus, aiding in the prevention of theft or vandalism.

PEACE-OF-MIND FEATURES AND BENEFITS:

- Mier Products, Inc. is a pioneer in the vehicle detection industry with over 25 years of experience
- Know when someone approaches before they are at the door
- Detect vehicles approaching remote buildings or equipment and be warned to investigate if it is a friend, a customer, or a possible thief
- It's tamper-proof; if someone tries to move a sensor an alert is triggered
- Sensors operate from -40 degrees Fahrenheit to +125 degrees
- Each system includes a limited warranty
- Each system includes free technical assistance for the life of the product
- No worries of the false alarms common to PIR sensors
- All of the Drive-Alert Systems are made in the USA!

OPTIONAL FEATURES:

- Turn on lights for up to 45 minutes whenever a vehicle approaches
- Sound chimes in multiple rooms and/or turn on lights by simply plugging chimes or lamp modules into common household outlets
- Receive notification when customers arrive at a drive-up window
